Run commands in the Command Menu

- Kayce Basques

Sofia Emelianova

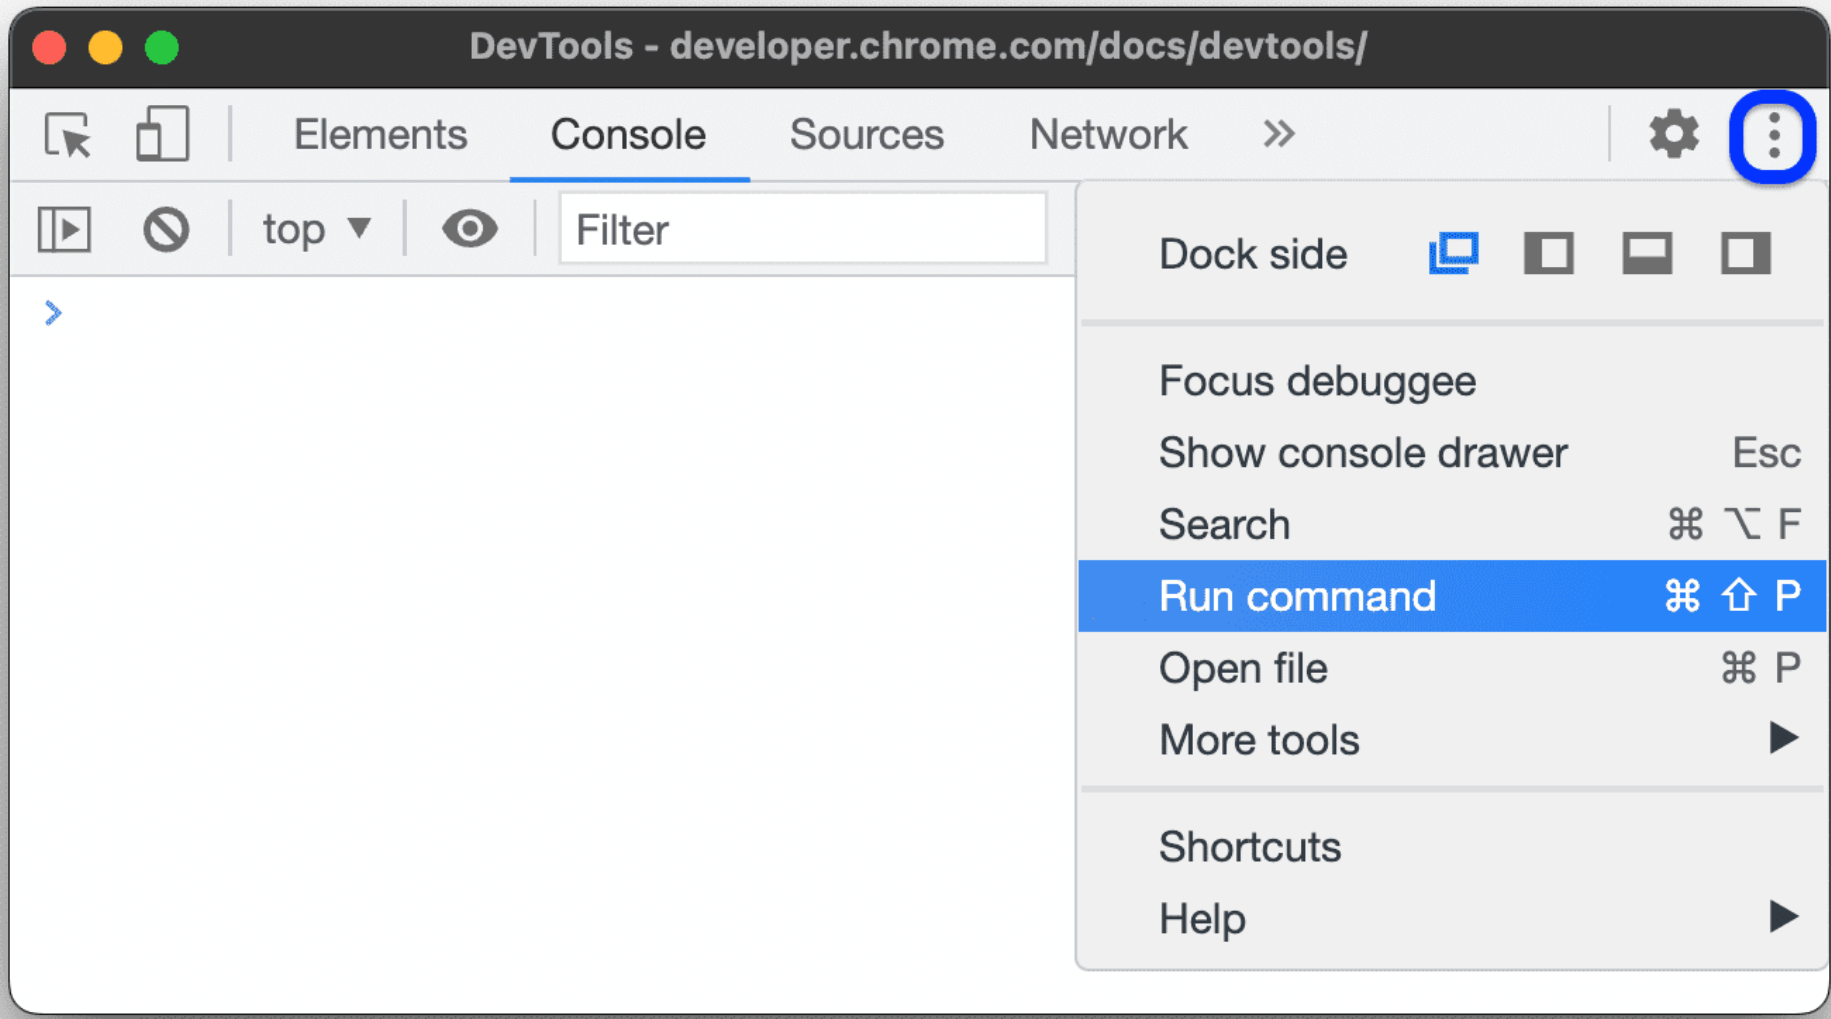

The Command Menu provides a fast way to navigate the Chrome DevTools UI and accomplish common tasks, such as [disabling JavaScript](#). You may be familiar with a similar feature in Visual Studio Code called the [Command Palette](#), which was the original inspiration for the Command Menu.

Open the Command Menu

To open the **Command Menu**:

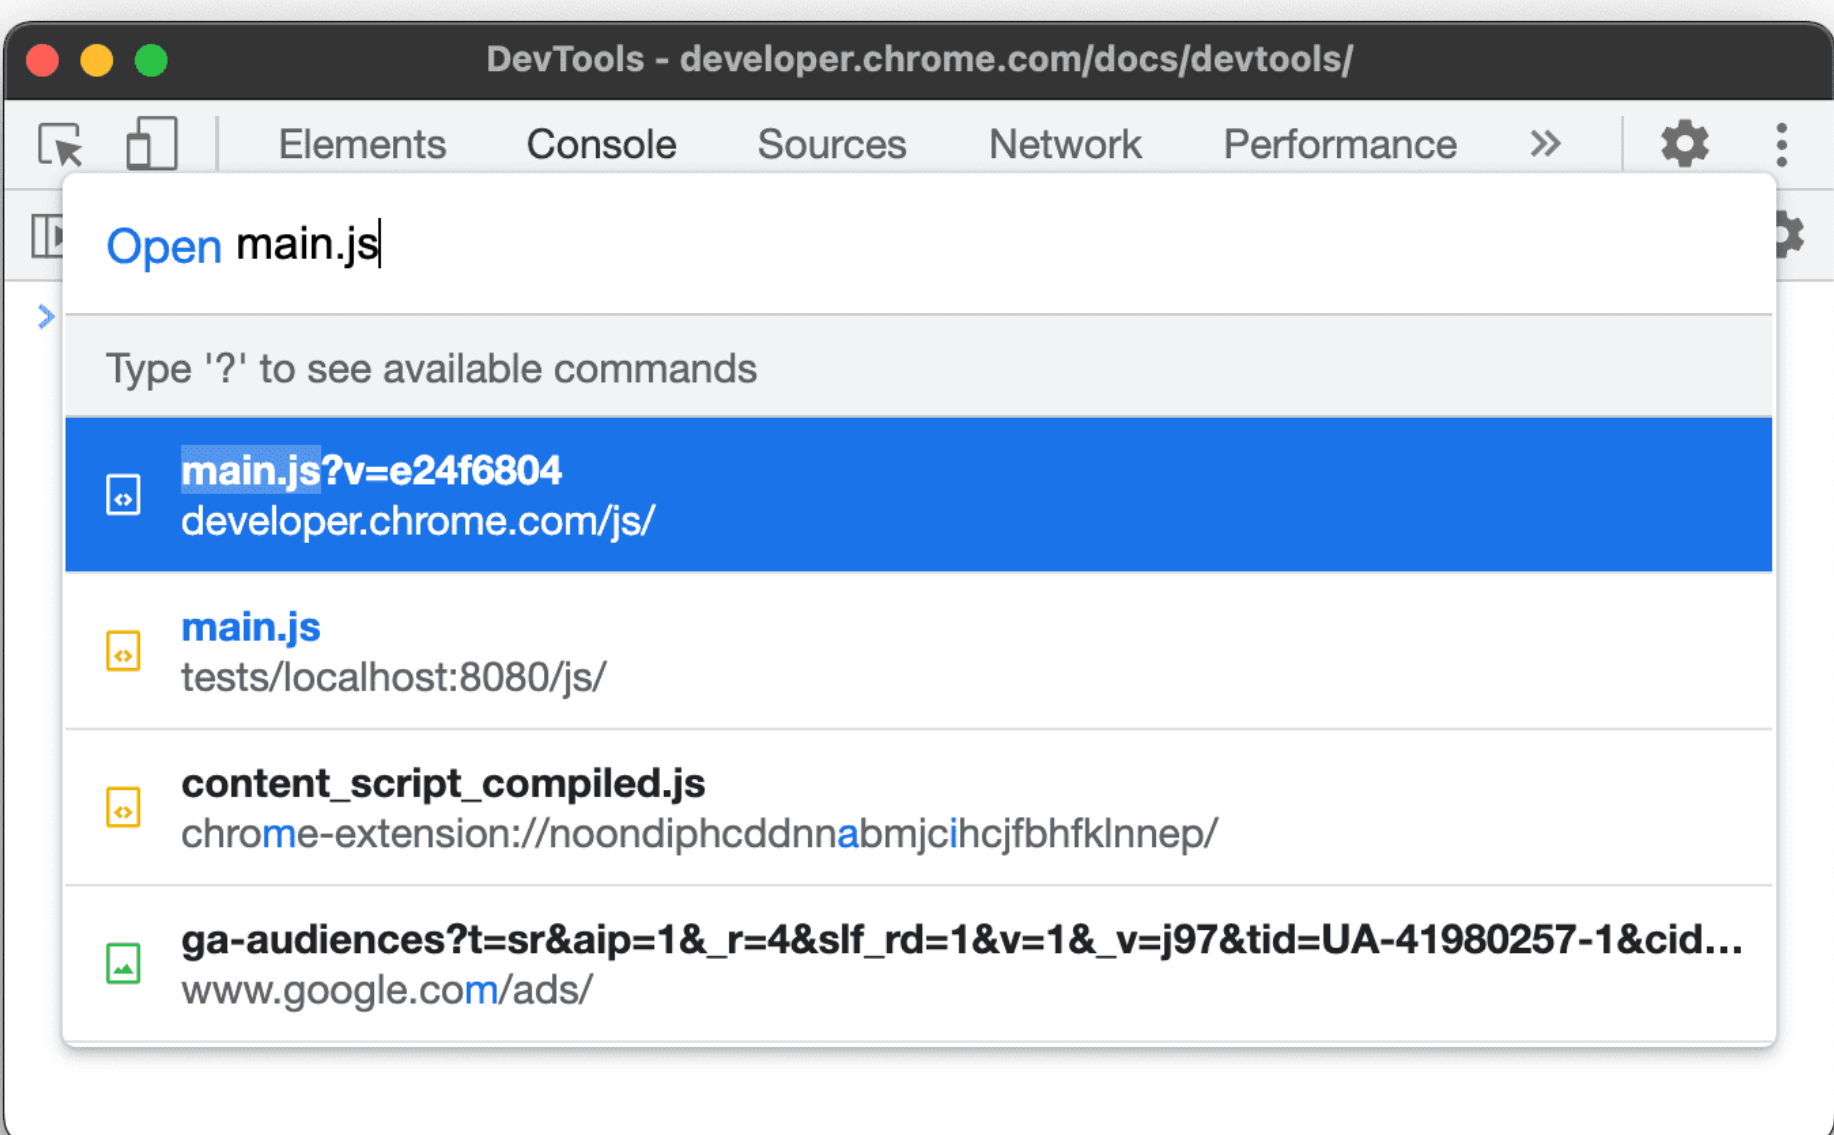

- Press **Control+Shift+P** (Windows / Linux) or **Command+Shift+P** (Mac).
- Click **Customize and control DevTools** and then select **Run command**.

Open files

If you use the workflow outlined in [Open the Command Menu](#), the Command Menu opens with a **Run** > prepended in the text box.

To open a file instead, delete the > character and start typing a file name.

The **Run** prepend changes to **Open** and DevTools searches for relevant files instead.

Alternatively, you can go straight to the **Open File** menu in one of the following ways:

- Press **Control+P** (Windows / Linux) or **Command+P** (Mac).
- Click **Customize and control DevTools** and then select **Open file**.

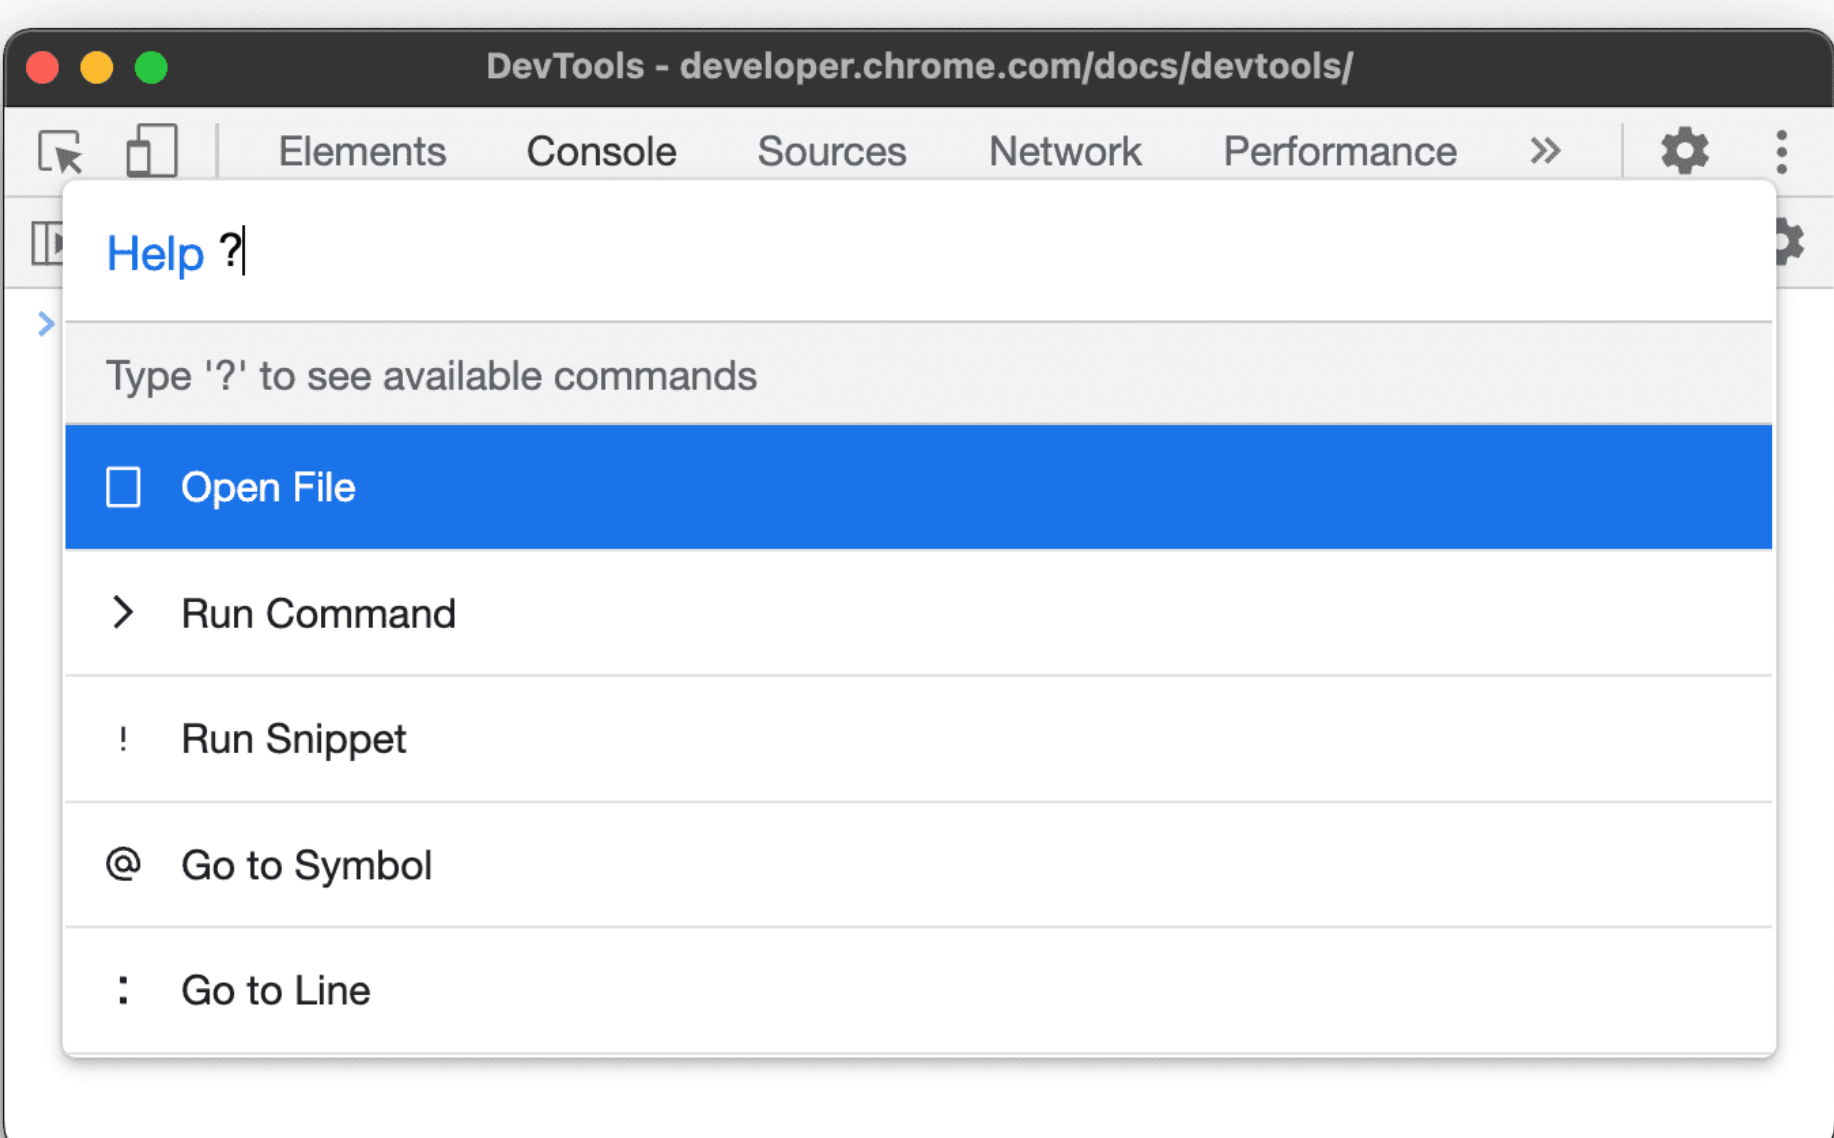

Open ignore-listed files

Note: This is a preview feature available in Chrome from version 106.

By default, DevTools hides the files of known third-parties. To open such files from the menu, disable the [Hide ignore-listed sources](#) option in the **Sources** panel.

See other available actions

To see other actions available from the **Command Menu**, delete the > character and type ?.
